

subtle - Feature #168

Prefix keybindings for individual grabs. Like Emacs.

01/02/2011 09:22 PM - Dennis de Vaal

Description			
It would be nice if you could define a prefix keybinding for individual grabs. For example:			
<pre>grab 'C-x', :SubtleEscape grab 'v' do client = Subtlex::Client.all.select { c 'vim' == c.instance } unless(client.empty?) client.first.focus else Subtlex::Subtle.spawn('urxvte -name vim -e vim') end end</pre>			
You would need to press Ctrl + x, (let go off the keys) and then v, to launch Vim. Like the well-known Emacs text editor.			
Currently it is only possible to define this globally:			
<pre># Escape grab grab 'C-y', :SubtleEscape</pre>			
This means you need to press Ctrl + y for every defined grab. This it not something you want to do all the time.
